REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: Applicant recites a track structure having a long stator linear drive for propelling a vehicle. The long stator assembly is comprised of a plurality of elements arranged in a longitudinal line. Each stator element is comprised of stator packet having front and back ends having complimentary contour and counter contour surfaces allowing for a cogged fitting between adjacent stator sections ends allowing the packs to mesh and connect together. The cogged surfaces are arranged both vertically and horizontally in a checker board configuration. The cogged fittings allow for a gap in the material of the cogged surfaces with the width of the gap measured in a longitudinal direction.

The prior art made of reference, taken singularly or in combination, does not adequately disclose the features of the instant claims. Specifically, the prior art of Raschbichler et al (US 5,370,059) does not show contoured ends of the stator for allowing for a cogged fitting with an adjacent stator section. The prior art of Raschbichler (US 4,665,329) discloses a contour and counter contour surface on adjacent stator sections. However, Raschbichler (329) does not show the contour sections to be arranged vertically and horizontally in a checker board configuration nor does Raschbichler (329) show a material gap measured in a longitudinal direction. In contrast to a positive gap Raschbichler (329) states that the groove and tongue arrangement assures a positive clamping together of adjacent packets.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
